

SIRIUS/VICTOR HYPERAM MEMORY EXPANSION BOARD

**AVAILABLE NOW FROM INTELLIGENCE RESEARCH — ALL THE MEMORY
YOU COULD POSSIBLY WANT ON ONE BOARD.**

This board can be obtained with either 128K, 256K, 384K or a maximum of 512K fully-socketed memory. All boards are user-expandable to 512K.

All boards are provided with a support clip to enable the Hyperam to be totally secure within the Sirius.

Hyperdrive and Hyperspool software is available for the Sirius Hyperam Memory Expansion Boards.

Hyperdrive software allows the memory to be used as a pseudo-disk operating at about ten times the speed of a normal floppy.

Hyperspool software allows memory to be used as a printer buffer.

Intelligence Research is now offering this software free of charge with the 384K and 512K Sirius Boards.
